

Wireless LAN Solutions

The Nova Networks division of Wireless LAN Solutions provides complete wireless networking and Internet access systems for home, office, enterprise and indoor/outdoor environments.

The Technology

With our "one-card-one-technology" solution, Nova Networks is ready to meet all your wireless LAN requirements, even high security applications. We can deliver broadband Internet access to your wireless appliance regardless of your location. Whether you're at home, inside the office, at a hotel room, or even in an airport lounge – we'll keep you connected.

The Nova Networks Line-up includes solutions by:

- ORINOCO by Lucent Technologies
- Aironet by CISCO SYSTEMS
- 3Com's Wireless Lan Products

The Card

Nova Networks Wireless LAN products all use the same PC Card worldwide: the Wi-Fi (802.11b HR) compliant radio card. It provides high-speed (11 Mbps) wireless networking and Internet Access for desktop computers, as well as a broad range of mobile computing devices. The Wi-Fi fits most laptops and wireless appliances and is congruent with other 802.11 compliant systems, including the popular Apple AirPort system.

Our Staff

Our Wireless Solutions Technical staff is dedicated to delivering the appropriate system for your requirements. They will make recommendations on access points, infrastructures and software packages, as required for the specific demands of your wireless system. And with a wide product line of wireless and mobile systems, Nova Networks can meet the unique needs of a variety of clients, including enterprises, service providers and network operators.

Our Vision

Our vision is to provide customers the freedom of network and Internet access, at any time, in any place.
